

The ERA® Bar Attachment System

– Add Resiliency To Your Bar

The ERA Attachment System is designed for partial dentures, overdentures and, implant-supported overdenture cases. And now with the ERA Micro Attachment System, it's the smallest partial/overdenture attachment.

The Weldable and Drill and Tap versions allow for attachment retrievability. Optional Micro ERA metal jacket holds the attachment male securely in the denture base and comes preloaded with the black fabrication male. Males are changed without the use of auto polymerizing acrylic.

ERA Cad-Cam Bar*

Call or visit our website for more information and meaningful insights from dentists who have found they get the best outcomes from using the ERA System.

Benefits found only in the ERA Attachment System:

Resiliency – reduces occlusal load¹

Easy to Use – tactile feel as it gently snaps in place, plus 360° angulation

Longevity – proven over 20 years in tens of thousands of cases²
