

Digital Denture – 100 % your way

BDCreator[®] PLUS

The process-integrated CAD software

NEW
Available for
single dentures
too.
BDCreator[®] PLUS

BD Creator® PLUS

The process-integrated CAD software for

Full dentures

- Software-based model analysis supports the selection and size of the dental arch width
- Automatic suggestion of the teeth rows
- Mesh editing and analysis – quickly find and correct gaps and errors in the data record
- Import of STL files from ^{BD}KEY® Set, models, impressions, bite registrations, WAX RIMS or relined dentures

Single arch complete dentures and overdentures over attachments

NEW

- CAD design and construction of upper or lower dentures
- Occlusal adjustments are implemented directly in the milling process
- Interactive assistance in selecting the correct tooth arrangement

Interim and immediate complete dentures

NEW

- Mesh processing for fast production of interim and immediate dentures
- Cut and delete function
- Erasing of remaining teeth with intelligent gap closing function
- No interruption of the workflow by third-party software post-processing

CREATE YOUR WAY

Fully adjustable virtual articulator

NEW

- With an individually adjustable anterior guidance controller to determine the movement paths
- Simulation of the movement paths
- Automatic determination and adaptation of the occlusal correction paths

Occlusal correction

NEW

- Virtual representation of static and dynamic contacts
- Interactive control options due to movement simulation

Mesh analysis

NEW

- Color map comparison
- Comprehensive analysis
- Automatic detection of gaps in the data record

Make use of the many advantages the Baltic Denture System to design and manufacture your 100 % digital denture

- Fast production, one milling process
- No bonding of individual teeth or arches of teeth
- No interdental closure
- No model production
- No manual occlusal adjusting

Competence along your way

In the Baltic Denture System we have combined our decade-long expertise in the development of denture teeth.

The integrated set-up concept in the Baltic Denture System is based on Prof. Dr. Gerber / TIF

NEW

Elevate your process quality! Break new ground in work preparation!

An accurate interocclusal record and impressions are very important for the correct design and manufacture of dentures, whether analog or digital. Minimise potential errors from the beginning of your workflow by processing digitally supported functional trays and bite templates.

Individual functional trays

- Create digital offsets
- Digitally edit tray flow channels
- Digital Face Bow geometry available

Individual bite registration - without pre-bite registration

- Software-driven jaw relationship proposal
- Create digital offsets
- Digitally edit tray flow channels
- Various tray design geometry available
- Digital Face Bow geometry available

Pin-point registration - without pre-bite registration

- Software-driven jaw relationship proposal
- Undercut control
- Various pin-point registration geometry available
- Digital Face Bow geometry available

Begin
your digital journey
work preparation steps for

- Accurate results
- Process quality
- More efficiency
